

Get a secure printing solution adapted to your special needs

HP and Celiveo Enterprise

What if you could...

- Benefit from a print management solution tailored to the specific needs of your company?
- Print documents where and when you need them, with full encryption, on any printer across the organisation?
- Delete unclaimed and obsolete jobs prior to printing, saving money and conserving resources?
- Control access to printers, multifunction printers (MFPs), and large-format printers (LFPs)—as well as print jobs, copy, scan, email, fax, and workflow solutions—using only your corporate ID?
- Decommission all print and print-related servers across the organisation?

The challenge

Your company has its own needs and requirements when it comes to printing or scanning, due to its industry. With Celiveo connectors, your company can benefit from a print solution tailor-made for your needs. With the HP and Celiveo solution, printing adapts to your company's special needs and workflow, yet you still maintain tight control over security, compliance, and costs.

Solution overview

HP and Celiveo Enterprise is plug-and-play for many companies thanks to special vertical industry connectors. Combined with Celiveo Enterprise, they help organisations better integrate printing into their company workflow, and bring convenience, security, accountability, resilience, and mobility to their imaging and printing environment. This versatile solution is also multi-vendor, Citrix-ready and VMware-ready to adapt to all situations.

Healthcare connector

Printing in healthcare organisations is often a challenge, from providing VDI print mobility across a hospital to ensuring printing of protected health information (PHI) is in compliance with governmental regulations.

HP and Celiveo Enterprise with its Healthcare connector eases printing by allowing users to release documents from any printer in

the hospital using their badge. Unclaimed documents are safely erased. This solution also interfaces with SSO such as Caradigm or Onesign, simplifies virtual desktop printing, and saves clinician time while lowering printing costs.

FSI connector

Financial organisations must protect customers' highly sensitive information and require printers to be always available, especially in remote branches. HP and Celiveo Enterprise with its FSI connector meets all these priorities with strong authentication, strong peer-to-peer print data encryption, and ZeroServer™ technology with high availability for headquarter and remote branch-office printing.

Oil & Gas connector

Oil and gas companies must control access to any device that prints, scans or sends information, with the highest level of security and encryption using corporate PKI smartcards. HP and Celiveo Enterprise with its Oil & Gas connector meets those requirements with strong authentication, strong peer-to-peer print data encryption, and ZeroServer technology that reduces total cost of ownership.

How it works

Problem

Sime Darby Berhad, a multinational conglomerate, needed to replace an aging, multi-vendor imaging and printing fleet that had become expensive and difficult to manage. Beyond merely reducing costs, the company sought to create a more efficient printing infrastructure.

Solution

HP and Celiveo helped Sime Darby proactively monitor and control printing activity and improve security. The company expects to reduce imaging and printing costs by \$207,000 USD over a 5-year span, and will use HP and Celiveo as the foundation for further improvements in document management, workflow, and compliance.

Manufacturing connector

Manufacturers expect printing to function perfectly and with high availability. HP and Celiveo Enterprise with its Manufacturing connector manages printing from desktops, servers and ERP, eliminates needless printing, reduces costs, eases information technology (IT) support demands, and gives workers more mobile printing options.

Public Sector connector

Governmental organisations require advanced security for information printing and scanning. HP and Celiveo Enterprise with its Public Sector connector meets that requirement with strong authentication, strong peer-to-peer data encryption, red/green network support, and its ability to interface with classification systems.

SAP printing connector

Managing SAP printing can be difficult, requiring costly expertise. End-users often have little control or information on their print jobs. HP and Celiveo Enterprise with its Print-ERP/SAP connector simplifies SAP printing through a unique SAP print queue, pull printing, print confirmation, and accurate tracking and reporting on output device activity.

Authenticate using existing credentials

Use a variety of methods to authenticate identities at the device—including strong security PKI smartcards—against company directories or corporate SSO.

Interface with industry-specific software

- Secure print from Windows®, Mac, EMRs and ERPs
- Get classification level from Titus middleware
- Authenticate against leading SSO middleware

Get started

Contact your local HP representative to:

- Set up a workshop to assess your specific business needs
- Establish a plan to implement the best solution for today and the future
- Identify a communications solution that can help your company save money
