

Minimize check fraud and counterfeited print

HP Check Printing Security Solution offers outstanding print security

What if you could...

- Replace your noisy, single-process, dedicated dot matrix printers with compatible, high-quality HP LaserJet printers?
- Use a patented security toner to prevent the alteration of printed checks?
- Print with the convenience of check printing without compromising security?
- Deploy a solution that meets government, regulatory, and internal compliance mandates for fraud prevention, privacy, and auditing—yet addresses your organization's unique budget and operational requirements?
- Increase operational efficiency?

HP Check Printing Security Solution

Check fraud is on the rise. Counterfeiters steal preprinted check stock, chemically alter checks, force printer jams as a means to print duplicate checks, or remove the characters right off the paper via chemical or scraping methods. Organizations that fail to take steps to minimize the risk of fraud and counterfeiting can be liable for losses that will impact their bottom line.

Solution at a glance

HP delivers technologies to control check printing operations, and help prevent fraud on finished checks, adding security to a variety of applications. Using an HP LaserJet printer and a selection of proven security enhancements, organizations can capture the full value of secure, distributed, on-demand check issuance. Three solutions enable different levels of tamper-evident security, depending upon requirements, allowing secure printing on blank or preprinted check stock.

Widest range of specialty supplies

- Secure toner adds a cost-effective layer of security to pre-encoded check stock.
- Magnetic ink character recognition (MICR) toner delivers a high level of fraud prevention and enables printing on blank check stock.
- Indelible laser solution causes printed characters to “bleed through” the thickness of the paper.
- All MICR toners are uniquely formulated for HP LaserJet printers at standard print density settings.
- HP-based secure toner exceeds the most stringent ANSI, ABA, and CBA standards.
- Secure toner and MICR toner force a bright red stain to appear if chemical alteration is attempted.

HP Check Printing Security Solution is a cost-effective way to enhance security

MICR printer quality assurance and design features

- Three-position key lock control gives the department manager complete control over the printer.
- Built-in MICR toner sensing prohibits check printing without MICR toner, and works together with MICR cartridges to provide consistent quality, avoiding costly bank-clearing reject charges.
- MICR fonts are enabled for each HP LaserJet printer, and are added to the actual printer memory.
- Exact positioning technology reduces the risk of rejected checks. A misaligned MICR line can cause banks to reject checks, costing organizations money and time. Exact positioning technology allows users to precisely adjust the MICR line, without affecting the data file.
- MICR upgrade kits allow you to easily upgrade from a standard HP LaserJet black-and-white printer to an HP MICR-enabled printer.

The HP Solution Business Partner Accreditation, Certification, and Test program (ACT)

HP's ACT is the first in the industry to accredit partners' internal processes, review their designs, and certify their solutions, providing an unmatched level of quality assurance.

Fraud prevention technologies

- Paper tray locks and tray-back shielding assure valuable check stock is safe from unauthorized removal and helps prevent the creation of counterfeit checks.
- Intelligent anti-tampering technology prints user-defined watermarks onto checks, making alteration impractical.
- Custom signatures, company logos, and security fonts added to the password-protected printer memory help prevent counterfeiting while improving the efficiency of check production.
- A feature to disable jam recovery overrides the standard copy count and jam recovery settings to prevent intentional paper jams that could lead to duplicate check printing.

Using HP Web Jetadmin

- Identify, group, and manage select HP printers and multifunction printers (MFPs) throughout their printing fleet.
- Verify that MICR toner is installed in the appropriate devices.

Why HP?

For more than 50 years, HP has been partnering with leading banking, financial services, and insurance organizations, supplying the technical expertise and business savvy required to help position these companies at the forefront of their industry. Today, industry analysts rank HP as a leading provider of information technology and services to the financial services and insurance industries. In fact, 8 of the top 10 financial services and insurance companies are HP Managed Print Services clients.¹

HP also provides a wide range of products and services to the industry that help our clients reach their goals, from mission-critical processing to best-in-class testing, monitoring, security, and analytics—along with the infrastructure that supports it.

We will take the time to understand your specific needs and create a plan to help optimize your fleet, ensure data and document security, and manage your evolving workplace.

Get started

Contact your local HP representative to:

- Set up a workshop to assess your specific business needs.
- Establish a plan to implement the best solution for today and into the future.
- Identify an environmental approach that can help your organization save money.
