Authenticate, safeguard, secure

HP Access Control Secure Authentication helps safeguard healthcare information at the point of care

What if you could...

- Enhance the security of networked printers and multifunction printers (MFPs) by easily authenticating devices and users?
- Provide users with a single authentication solution that supports a wide variety of proximity card protocols?
- Offer mobile or remote clinical care workers with the ability to access print wherever they need to within the healthcare ecosystem?
- Reduce IT support costs while enabling 7x24 hour availability?
- Support organizational security and privacy policies?

## Extend security protocols to printed material

Your healthcare organization faces the challenge of protecting and controlling the print and distribution of patient information. You need a solution that increases security without expensive, complicated implementation that staff and clinicians resist. Provide clinical care teams with a secure and flexible way to access devices and print jobs to help them meet compliance regulations and privacy mandates at the point of care—and to help you restore control and reduce the costs of using imaging and printing resources.

Help protect patient information that passes through your networked imaging and printing devices with robust authentication features that integrate with existing network credentials, including Lightweight Directory Access Protocol (LDAP) and Active Directory. Use HP Access Control Secure Authentication to increase document security by requiring user authentication at the device.

Solution at a glance

Enable your healthcare organization to stop sensitive documents from going unclaimed, and prevent unauthorized use of devices— all while providing local, mobile, and remote users with convenient authentication options that enable them to print virtually wherever and whenever healthcare happens.[1] Securing imaging and printing devices can be virtually seamless— HP Access Control Secure Authentication offers a variety of authentication options, including HP proximity card readers, alpha-numeric personal identification codes (PIC), personal identification number codes (PIN), and smart cards. Easily bring imaging and printing devices up to organization security standards. Reduce costs and meet environmental goals by helping to eliminate the unwarranted use of devices. And, when you deploy HP Access Control Secure Authentication through an HP Managed Print Services agreement, the solution supports not only HP single-function printers, MFPs, and networked scanners, but selected imaging and printing devices from Canon, Lexmark, Ricoh, and Xerox as well, so you can gain these benefits with your current asset mix.

HP Access Control Secure Authentication

Users can retrieve jobs when and where they need them.

Users can authenticate with ease through a variety of methods.

Solution features

Authenticate with ease via a variety of options

Provide easy authentication directly at the device, using a single authentication solution. HP proximity card readers eliminate the hassles of using logins and long passwords, and can be programmed to read two proximity card protocols simultaneously. For added security, users can also authenticate using PIC codes, PIN codes, and smart cards. Give authentication capabilities to up to a million users, and define which functions require authentication.

Secure print jobs and devices

Use HP Access Control Secure Authentication along with HP Access Control Intelligent Rights Management to set restrictions on devices and functionality, and to limit access to authorized users. Combine secure authentication with HP Access Control Secure Pull Printing to provide an easy way to retrieve jobs stored on a network server or the user's PC—even give mobile and remote employees the option to authenticate and release output with a mobile device, using HP Access Control Mobile Release. Authentication applies to fax, email, copy, and print jobs, and many other MFP functions.

Control costs

Better manage imaging and printing expenses and environments. By using HP Access Control Secure Authentication with HP Access Control Intelligent Rights Management to control access to networked devices, you can limit who prints and what they print. Help conserve resources, reduce costs, and create efficiencies throughout the organization.

Use a variety of networked devices

Increase security by requiring authentication for your fleet of printers and MFPs—jobs remain on any networked HP Access Control Secure Pull Printing-enabled device until accessed by the specific user. Provide security controls for sending email directly from the MFP. Simply authenticate, and then the email is pre-populated with the user's name and address.

HP at work

A health sciences company began implementing practices to streamline their resource-intensive printing and imaging environment. But some users had difficulty acclimating—they were reluctant to give up individual printers, and concerned about confidentiality when printing sensitive materials.

HP Access Control Secure Authentication successfully addressed their needs, enabling employees to retrieve their specific print job when they got to the printer through a simple PIN code, which helped ensure documents remained confidential. This helped the company increase efficiencies while meeting security needs and applying company-wide print policies. Overall, the company consolidated from roughly 500 devices down to approximately 100.

Why HP?

For more than 50 years, HP has been partnering with leading healthcare organizations, supplying the technical expertise and business savvy required to position these companies at the forefront of healthcare innovation. Today, industry analysts rank HP as a leading provider of information technology and services to the health and life sciences industry. In fact, nearly half of the top 10 healthcare equipment and services companies are HP Managed Print Services clients.[2]

HP's patient-centered healthcare solutions enable providers and empower patients with more powerful and intuitive solutions that deliver better care. We can help you improve care delivery, patient engagement, and population health management.

We will take the time to understand your specific needs and create a plan to help optimize your fleet, ensure data and document security, and manage your evolving workplace.

Get started

Contact your local HP representative to:

- Set up a workshop to assess your specific business needs.
- Establish a plan to implement the best solution for today and into the future.
- Identify an environmental approach that can help your organization save money.
