

**Brief**

# Let HP integrate and package your complete PC solution

## **HP Configuration Services: Integration and Packaging Services**

Integrate third-party hardware, collaterals, or accessories with your new HP PCs at the factory

### **One integration and packaging process means your PCs arrive ready to go**

With HP Integration and Packaging Services, it's easy to integrate third-party components into your new HP PCs. The same people who build your HP hardware handle all the complexities of device integration right at the HP factory.

HP Integration and Packaging Services leverage HP's industry-leading factory, logistics, and integration processes to seamlessly add content to device packaging, maximizing packaging efforts and reducing packaging to support your ongoing green initiatives and simplify things for your IT team. Additionally, you can have HP procure and integrate third-party hardware components right at the factory during the manufacturing and build processes to provide that you receive devices ready to use.

HP offers the following services for integrating and packaging needs:

- HP Drop-in PC Packaging Service
- HP Device Model Management Service
- HP Third-Party Hardware Integration Service

## Simplify PC deployment and management

It's always easier when you receive an order from a supplier with all the pieces together. Why not have your PC device orders arrive with everything needed for each PC in the same box? With the HP Drop-in PC Packaging Service, you can leverage HP's logistics and inventory capabilities at the factory to add custom documents like instructions for activating devices that will improve the end-user setup experience. This service can also extend to small items that fit in original device system packaging, such as cables or small accessories, resulting in reduced packaging to support green initiatives and reducing the need to manage receipt of multiple packages to support a single device.

Along the same lines, it makes sense for an enterprise to standardize on the same device model. The HP Device Model Management service provides you with the ability to select device models to standardize on throughout an agreed manufacturing period of time, reducing the cost of supporting configuration differences and bringing stability to business applications that might be impacted by changes in device models.

And just as you benefit from having all the documentation, cabling, and other accessories in the same package for each device, you can also simplify and streamline things with the HP Third-party Hardware Integration Service, in which HP procures and integrates HP or non-HP hardware into your HP PC devices for you.

All HP Integration and Packaging Services can be completed in 15 to 16 business days, provided the customer requirements have been met. Customer requirements include:

- Defining and submitting requirements and specifications
- Final acceptance and approval to implement prior to deployment
