Work smarter, with higher productivity and uptime

The HP Indigo Smart Uptime Kit contains the most frequently needed replacement parts based on usage and consumption studies. With an HP Indigo Smart Uptime Kit, you can ensure that your presses are up and running for maximum production capability, while minimising the time and effort involved with looking for and identifying your spare parts. Having an Uptime Kit on hand means that a qualified onsite operator can install new parts (up to 60% of the kit parts) without delay, dramatically reducing time-to-repair, 24/7.

Easily organize and track spare parts

Use the barcode scanner to register receipt of each part at the HP Smart Uptime Kit software, and its exact location in the cabinet. Then, as you remove a part from the cabinet, scan it again and register it as moved or consumed.

It is important to keep your HP Smart Uptime Kit fully equipped. Any time a part is used, a replacement should be ordered immediately via the missing parts list in the notification table. You can track order status on the Order Status report.

Scale-up your spare parts inventory as needed

You can manage all your onsite HP Uptime Kits for HP PageWide Web Presses, using the same PC and barcode scanner; just add extra cabinets as needed to accommodate the additional sets of parts.

Likewise, you can add additional sets of spare parts, a single important part, or selected parts for peak season. The cloud-based software enables you to catalog all spare parts and keep track of their location, even if they are stored outside of the cabinet.

Keep your spare parts data safe and accessible

Get organized and get connected, with the dedicated inventory management software solution. You can log parts, track usage, extract reports and order replacement parts effectively to assure you are well-equipped for high productivity. The dedicated cloud-based parts software keeps your data safe, even in the event of a PC failure. It also allows us to help you track your inventory and identify any gaps or missing parts in your HP Uptime Kit.

Already benefiting from an HP Uptime Kit of spare parts?

This is the time to upgrade your readiness. If you already have one or more HP Uptime Kits at your site, you can now upgrade your readiness with a dedicated cloud-based parts management software (Smart UTK), and further boost your productivity, while simplifying your parts management.
