

## Brief

# Reform PDC Business Document Platform

## HP and FabSoft

The only business document platform you will ever need.

### What if you could:

- Implement company-wide Secure Release/Follow-Me printing with quick access
- Implement an easy-to-use mobile print solution, releasing from any device in the company
- Implement departmental Scan-To workflows integrating to any ECM product or any system
- Have full control over printing, copying, and scanning throughout your organization

### Document processes are messy

You want the efficiencies, security, and cost savings possible with today's document technologies. Multiple vendors, multiple servers, and different support channels, however, makes it difficult. Disparate applications don't always work well together, putting a strain on limited IT resources.

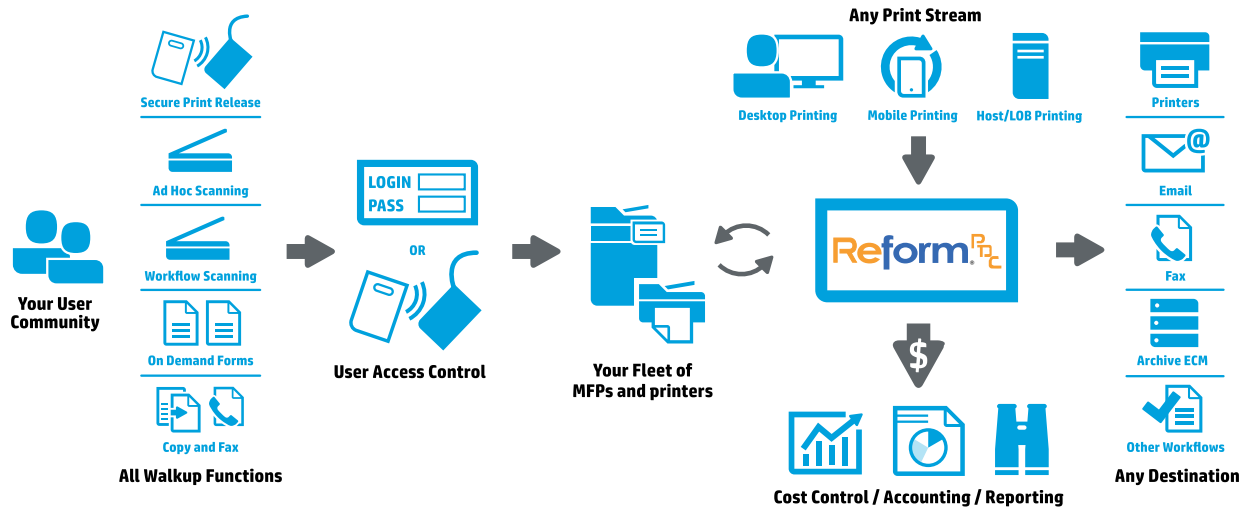

### The FabSoft Document Platform approach

FabSoft meets the challenge with an all-in-one business document platform. Reform PDC is the only automation solution HP users need when streamlining document workflows. Reform PDC supports Secure Release and Follow-Me printing, distributed scanning and Scan-To technology, mobile printing,

on-demand forms, variable data printing, cost control and reporting, optical mark recognition, and workflow/approval technology. All these capabilities exist on one server and one app on the multifunction printer (MFP), working together to provide powerful workflows. Reform PDC supports multi-brand device environments. The resulting solutions are highly scalable, providing enterprise-class throughput and failover.

### Working together with HP

Silver HP business partners offer leading-edge solutions that integrate with HP's wide portfolio of LaserJet imaging and printing products, and provide HP customers with an unparalleled breadth and depth of solution offerings around the world.

**Solution benefits**

- Comprehensive business document workflow infrastructure that fits on a single server
- Total cost of ownership for a single server dramatically reduces costs and simplifies your infrastructure.
- One solution to implement security and environmental policies around documents and devices
- Visibility to and control of costs around business documents and devices
- Printing and scanning from within the same MFP application, enabling powerful workflows

**Our solution partner**

**Build as you grow**

The Reform engine is deployed on a single server and supports enterprise-class document workflows via bi-directional integration with HP MFPs. The Reform Spooler supports all desktop printing, mobile printing, and host/line of business (LOB) print streams in various operating environments. Reform works with host systems, desktop printing, and MFPs, then applies business logic. Documents are then routed through an approval process, tagged for distribution, printed, faxed, emailed, or archived.

The Reform platform supports user access control by utilizing pin codes and proximity cards. The user community can then access approved walk-up functions at any MFP in the fleet to perform Secure Release printing, ad hoc and workflow scanning, on-demand forms retrieval, and of course, copy and fax functions.

Enterprise-wide, the Reform Tracker facility reports on and controls activity around all document processes. The result is a comprehensive cost accounting, control, and reporting solution. Because Reform PDC is a modular solution, it allows you to build as you grow. Simply add new capabilities as you need them.

**Service and support**

The on-board Health Monitor oversees all aspects of the solution. If something goes wrong with any process, device, or server, an email alert is sent with details. All Reform PDC services are monitored, as well as server hardware, hard drive, SQL servers, and email servers. Contact your HP representative to learn more.

**Building on the value of strong relationships**

Working side by side with HP, we have the resources, experience, and knowledge needed to deliver customized solutions that meet your unique business requirements. For more than 50 years, HP has designed solutions that allow customers to actively anticipate change, and then act on it. Together, we use future-focused technology and services to design solutions that produce lasting value and maximum results—helping you meet today challenges while preparing for tomorrow's.
