The Golden Club for HP Indigo 7X00 presses Level 3 Advanced Operator course is intended for HP operators, looking to maintain their knowledge as the press they operate upgrades.

This hands-on training programme provides operators with the knowledge and skills required to perform advanced maintenance, troubleshooting and repair, and utilise the HP Indigo uptime kit for the HP Indigo presses. Multi-press environment operators will benefit the most from this training.

Course Objective

By the end of the training program HP Indigo operators will:

- Carry-out advanced troubleshooting by utilising remote support and better understand the technical documentation and special tools usage
- Implement in-depth diagnose and relevant parts replacement thus maximizing the utilization of the HP Indigo Onsite Uptime Kit Services
- Perform a number of advanced maintenance and repair procedures according to Production Excellence Routines

Why Indigo training from HP?

- The most in-depth Indigo knowledge in the industry, created by the people who designed the technology and the products
- Highest quality, certified instructors with real-world experience
- Extensive lab environment for hands-on practice
- Small class sizes maximising hands-on experience
- State-of-the-art training centres equipped with the latest press, front-end and finishing technologies

Audience

HP Indigo Level 3 Advanced Operators, who will be required to maintain and troubleshoot the HP Indigo 7500/7600/7800 presses.

Prerequisites

- Participation in the Level 1, Level 2 Digital Press Operator course and Level 3 Advanced Operator course for HP Indigo 7000 series
- Minimum of 6 months experience operating an HP Indigo 7000 series press as Level 3

Benefits to you

Trained HP Indigo Level 3 Advanced operators will enhance your Indigo printing operations' productivity by:

- Increase press uptime by solving advanced technical issues directly or under virtual support guidance
- Improve machine reliability by optimising the production maintenance routines
- Enhance understanding of print quality optimization and colour stability which reduces machine preparation and proofing times
- Advance flexibility in coordination and optimization of different production floor demands
- Support other operators outside of regular support hours

Detailed course outline.

Day 1	Skew and registration How to troubleshoot skew problems Feeder bridge, perfecter adjustments, duplex, conveyor adjustments Full duplex paper path calibration
Day 2	Print quality diagnostic: CATP Explanation: how to check print quality using CATP 15 different check points? How to troubleshoot: <ul style="list-style-type: none">• Density uniformity problems within the page• Small dot transferring• Maximum density inconsistency• Page to page colour differences
Day 3	CPR and imaging oil Gripper shaft troubleshooting DFS troubleshooting
