## HP Indigo Print Care is comprised of six toolsets

### Diagnostic tools

Enables the operator to independently diagnose and identify where a problem is occurring. Once the cause of the issue is identified, HP Indigo Print Care offers corrective actions for resolution. These include **element activations**, automatic and manual **tests**, pre-defined **dashboards** for tests<sup>1</sup>, as well as the ability to customize and save your own set of tests<sup>1</sup>. The **Substrate Transport Tool** helps to diagnose and adjust the substrate handling system.

### Troubleshooting tools

Guides the operator through identification of possible causes, corrective actions and automatic validation, for the most common press issues. Launched directly from an error message or a print quality issue, or initiated by the user. Features include:

- **Print Quality Assist:** Identifies the cause of print quality issues quickly. This intuitive tool provides a set of images that display the most common image defects. After selecting the image defect that best matches the situation, the tool provides guidance for troubleshooting and resolution of the issue.
- **Error Messages:** Quick and easy access to troubleshooting procedures directly from the press error message.
- **Automatic Alert Agent<sup>2</sup>:** Identifies and alerts the user in real time, once a print defect is detected. The tool provides a direct link to the print defect troubleshooting steps. Available for presses with an in-line scanner.
- **Supplies Care<sup>2</sup>:** Provides an efficient, user-friendly process for identifying and correcting supplies issues and print quality defects. The tool can save time, boost productivity and prevent unnecessary supplies replacements.

### Maintenance and calibration tools<sup>2</sup>

- **Maintenance routines:** Increase press availability and print quality, and maintain steady press health and top operating condition. The routines make it easier to perform ongoing maintenance, integrating simplicity, accessibility, and self-tracking with customization. This tool provides a visible indication of the press' maintenance condition.
- **Calibrations and installation procedures:** Wizards and automatic procedures for component calibration and installations are available to simplify procedures.

### Service tools

Provides operators a full picture of press status and information regarding various topics.

- **Press @ a Glance:** Access to press information that can assist in resolving press issues, such as measurements, events, test results, out-of-spec values, supplies and parts replacements, and press properties. Presented in chart and graph formats for quick and easy viewing.
- **ATP Procedures<sup>1</sup>:** This tool enables users to print a wide variety of jobs to test the press' print quality, without using the DFE.
