

# HP Sign & Display/Scitex FB500/700; Level 1 Operator

The HP Scitex FB500/FB700 Basic Printer Operation provides the basic knowledge to operate the HP Scitex FB500/FB700. The course introduces the operator to the HP Scitex FB500/700 printer, its main systems, features, components and operation. It enables the customer to get better familiarized with the printer, and focuses on its proper operation and maintenance. The course also provides knowledge for handling common problems and for maintaining best performance. The course is based on theoretical and practical sessions.

The Basic Operator Training offers limited RIP training including a basic overview of Caldera and Onyx RIP software. For advanced RIP features and color management training, please see the “NEXT STEPS” section below.

New FB500/700 operators without previous digital inkjet experience can expect a longer learning curve and should not expect to have a high level of proficiency without 3-6 months of operational experience.

**Course Title:** HP Sign & Display/Scitex FB500/700;  
Level 1 Operator

**HP Product Number:** HK238S

**Category:** Graphics/Sign & Display

**Course Length:** 4 Days

**Delivery Language:** English

**To Order:** Graphics Arts AMS Training at  
[amsgraphicstraining@hp.com](mailto:amsgraphicstraining@hp.com) or 877-415-3222

## Audience

Training is structured for individuals who are assigned to operate the HP Scitex FB500/FB700. The materials in the course have been written for persons who require a comprehensive understanding of how to operate and otherwise interact with the printer. The material is suitable for printer key operators and service technicians alike, although no service related information is included in this course Subhead

## Prerequisites

- English comprehension required for comprehending the course materials
- A working knowledge of digital inkjet printing is preferred although not required

## Course objective

By the end of this class you will be able to:

- Understand the safety and maintenance procedures
- Identify the parts and function of the printer
- Successfully print on different kinds of substrates
- Perform Basic RIP software functions
