

Ensure application compatibility with Windows 10

HP Configuration and Deployment: Windows Application Transformation Service for Windows 10

Keep your organisation running smoothly by identifying and addressing compatibility issues before migrating applications to Windows 10.

Benefits you'll receive as part of this service include:

- **Reduced disruption** when moving to Windows 10 from eliminating the need to rewrite Windows applications
- **Risk mitigation** from addressing any compatibility issues before the start of the migration process

Hit the ground running

Windows 10 offers organisations a host of new features and capabilities. But if your business relies on Windows® applications to fulfill key business functions, upgrading to a new operating system can be filled with as much risk as opportunity. If not identified early, application compatibility issues can cause serious disruptions within your business—and derail even the best-laid upgrade plans.

That's why HP has developed its Windows Application Transformation Service for Windows 10. This service supports your organisation by collecting information about the full list of Windows applications in use, determining if they will run successfully with Windows 10, and then addressing the design and implementation of any adjustments needed for applications that fail. By identifying potential problem applications before the start of your migration, HP can help you mitigate risks and reduce disruptions.

Clear communication and schedule

Before and during the process, HP will work with you to plan all the necessary activities, including the identification of any prerequisites for the service, and define a delivery schedule for the service that best meets your needs.

Efficient auditing of key applications

After initial planning, we will deploy tools for discovering installed Windows applications and their primary users within your organisation. We collect information about the full list of Windows applications in use, and determine if they will run successfully with Windows 10.

Thorough testing

HP will carry out essential testing to determine which applications will need remediation for Windows 10 compatibility.

Service feature highlights

Features provided under this HP service include:

- Service **planning**
- Windows application **auditing**
- Windows application **testing**
- Windows application **remediation**

Application transformation

After identifying applications with issues, we will design the required browser configurations and related configuration files to ensure compatibility. Then HP will carry out your agreed upon test plan. Successful completion of the relevant tests will be shared with you prior to planning the service rollout.

Choose to order the Windows Application Transformation Service for Windows 10 as either a service product or a service contract.
