

HP PrintOS Box

Automate and simplify file receipt and prepare process

Radically simplify the process of receiving, validating, preparing, and routing new jobs with HP PrintOS Box. A one-of-a-kind offering, PrintOS Box helps print service providers speed up file receipt, increasing the number of jobs that enter the production pipeline each and every day, while optimizing human resources.

Do your sales reps spend too much time each day on the order receipt process? If so, you are not alone. The act of receiving files from various sources (such as e-mail attachments, Dropbox, or WeTransfer), downloading them to your shop, validating their properties and imposing on the printed sheet before sending them into the next phase of production, while communicating back and forth with the customer can be a very resource and time consuming process.

Now imagine if there was a way to automate and simplify much of this process. The good news is that you now can. HP PrintOS Box is a cloud-based file exchange app—the only one of its kind optimized for print—that radically streamlines the process of receiving files, verifying their content, and quickly moving them into production.

How does PrintOS Box work?

PrintOS Box simplifies and streamlines the three-step submission process. Your print buyers can continue to submit files as they're accustomed to or alternatively go through PrintOS Box's Easy Submit tool. Files then get put into a repository for quick content validation. Here, PDF files are automatically preflighted¹ and a folder is automatically generated.

In addition, you can preview PDFs, Illustrator (AI), define an imposition template, adjust settings, set notifications, convert files to a PDF, archive, and much more. Once the file is analyzed and validated, it can be routed to the next step in production. This could be a network folder in your pre-press or creative departments, your HP Digital Press or Digital Front End, a hot folder, or your preferred RIP.

¹ Customer can share any file format but only PDF will go through preflight

Improve your clients experience with your own Easy Submit portal

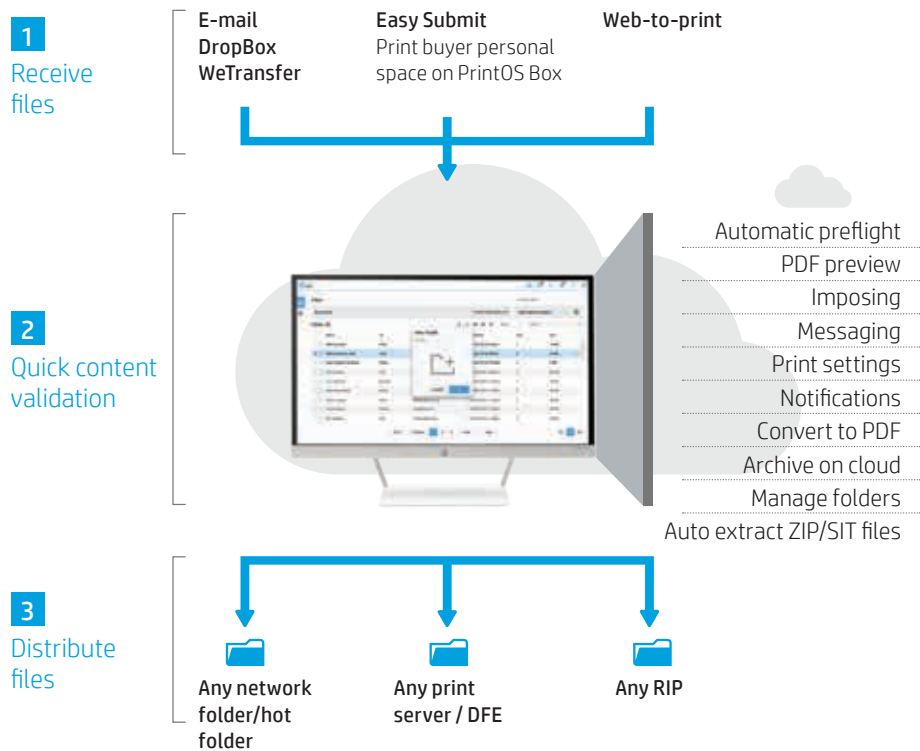

Not only does PrintOS Box significantly simplify your experience of receiving, validating, and routing files, your client's benefit too. They can continue submitting files using their preferred method, or they can submit files using HP PrintOS Box's Easy Submit portal. This portal takes them to an intuitive web page that you can brand with your own logo, and where they can easily upload multiple files at once. Plus, as jobs get into the production pipeline more quickly, you accelerate the delivery of their finished jobs.

Why PrintOS Box?

Move jobs into production much faster with a centralized, cloud-based system—optimized for print—that simplifies the submission process. Work with a system that is automated, efficient, and user friendly. Save time, gain control, and minimize errors. HP PrintOS Box does all this and more.

- Simple, intuitive setup and operation – This cloud-based solution enables quick, self ramp-up and easy plug and play convenience
- PrintOS Box delivers a consistent, unified experience—with one place to download files from, one portal for communication, one view into order initiation that streamlines the entire process
- With a faster, streamlined system, you can get more jobs into your print production pipeline
- Utilize PrintOS Box anytime, anywhere, and from virtually any device
