# Patient safety is about more than physical protocols

- Wrong-patient errors occur in virtually all stages of diagnosis and treatment.<sup>1</sup>
- The failure to correctly identify patients and match that information to an intended clinical intervention continues to result in wrong person errors, wrong site procedures, medication errors, transfusion errors, and diagnostic testing errors.<sup>2</sup>
- A 2015 Ponemon Institute study found that 54% of healthcare organizations suffered paper-based security incidents; the average cost of a data breach for healthcare organizations is estimated to be more than \$2.1 million, and could be costing the industry \$6 billion.<sup>3</sup>

## Printers are computers

The days of passively outputting paper are long gone; even simple multifunction is behind us. Printers don't just print, fax, scan, and copy anymore; they now have internal computing, storage, and software solutions that can intelligently process, route, and secure critical patient data—or not.

## HP printers lead the industry

HP printers can provide data routing solutions that get information where and when you need it—and do all of that with industry-leading security. Because nobody benefits from an illegible wristband, theft of protected patient information from an open out-tray, or a fraudulent prescription slip—least of all, your patients. But patients and doctors alike appreciate accuracy and security.

## Patient safety

That's what HP JetAdvantage Solutions for Healthcare are all about. Find out today how you can access all of these solutions and more from a single HP device.
