HP Air Force DPI PSC-2017

FA8055-14-A-0001

The world's most secure printing.¹

Print security is more than document security. Today's threats require attention to data in-transit and endpoint devices on the network. Only HP printers can stop an attack the moment it starts and HP Enterprise models can self-heal with unique security features like HP Sure Start with its self-healing BIOS, whitelisting, and run-time intrusion detection. HP CAC enabled MFPs increase security with true FIPS 140-2 validated cryptographic modules to help secure email and secure PDF.

Shop HP's secure line-up of printers, MFPs, and scanners and stay a step ahead of cyber threats—while supporting the only non-Chinese owned company/manufacturer of approved DPI contract printers.

HP Air Force DPI/PSC-2017

Standardize and consolidate your printing environment with HP for reduced TCO and predictable operational costs. HP offers printers at significantly lower costs than GSA pricing through the Air Force DPI Contract. Browse our offerings, and give an HP representative a call to discuss how to secure your network with HP printers and MFPs.

Don't forget to ask about even more aggressive pricing for volume purchases. HP offers desktops and laptops at significantly lower costs.

1. Most secure printers claim applies to HP Enterprise-class devices introduced beginning in 2015 and is based on HP review of 2016 published embedded security features of competitive in-class printers. Only HP offers a combination of security features for integrity checking down to the BIOS with self-healing capabilities. A FutureSmart service pack update may be required to activate security features. For list of compatible products, visit: <http://h20195.www2.hp.com/V2/GetDocument.aspx?docname=4AA6-1178ENW>. For more information, visit: www.hp.com/go/printersecurityclaims.

2. Measured using ISO/IEC 24734, excludes first set of test documents. For more information see hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity.

3. Duty cycle is defined as the maximum number of pages per month of imaged output. This value provides a comparison of product robustness in relation to other HP LaserJet or HP Color LaserJet devices, and enables appropriate deployment of printers and MFPs to satisfy the demands of connected individuals or groups.

4. HP Service levels and response times for HP Care Pack Services may vary depending on your geographic location and product model. Service starts on the date of hardware purchase. Restrictions and limitations may apply. For details, visit: hp.com/services/carepack.

5. Scan speeds up to 60 pages per minute (ppm)/120 images per minute (ipm) measured at 200 ppi (black and white, grayscale, color) and 300 pixels per inch (ppi) (black and white, grayscale); speeds up to 45 ppm/90 ipm measured at 300 ppi (color); used A4 sized paper.
