

HP Indigo Print Beat

For HP Indigo Sheet-Fed and Web-Fed Digital Presses

Benchmark press performance to drive continuous improvement

The HP Indigo Print Beat report is a performance dashboard, available to HP Indigo customers weekly to provide them with greater visibility and insight into their press' performance. The Print Beat report enables easy access to key performance information, which has been recognised as instrumental in driving continuous improvements in uptime and productivity for operational excellence.

The HP Indigo Print Beat is part of HP Service Advantage – an integrated portfolio of services for HP customers that enables predictable printing operations and optimised cost structure.

Simple, straightforward performance tracking

Overall performance is aggregated to a single 0-100 Print Beat score, so it is easy to understand your overall production performance and where opportunities for improvement exist.

Multiple performance indicators

Excellence in production comes from multiple areas. The Print Beat report tracks performance across five key parameters: print volume, failure rates, jam rates, restart rates, and supplies lifespan. These indicators not only show you how well your production did, but also on which areas to focus.

Drives continuous improvement

Improvement can easily be tracked by looking at the arrow signs. Up means better than the previous week, down is worse, and the equal sign means you are on par versus your prior week's performance.

Sent to your inbox every week

The Print Beat report is automatically sent every week, giving you easy access for production visibility and insight. It is also available via PrintOS Web and mobile application.

Full transparency and shared goals

Your assigned primary HP engineer and the service team receive the same report on a weekly basis, for full transparency and goal sharing.

HP Indigo Print Beat Guidelines

Print Volume is the total number of impressions in a given time period.

Availability is the total percentage and time a press is available for printing and not actively involved in failure recovery or maintenance activities.

Technical issues is calculated as a combination of failures and jams (For Web-Fed presses, Technical issues are only failures). A failure happens every time the press moves from "Printing" or "Ready" state to "Standby" state without the operator actively requesting it to do so. a Jam happens every time a sheet of substrate gets stuck inside the press and causes it to stop.

Restarts is the number of restart processes performed by the press or the PC that runs the press.

Supplies lifespan is calculated for HP Indigo supplies: PIP and Blanket. The average supplies lifespan is a percentage of the HP Indigo supplies guidelines.

How to read your Print Beat report

Customer name, report period

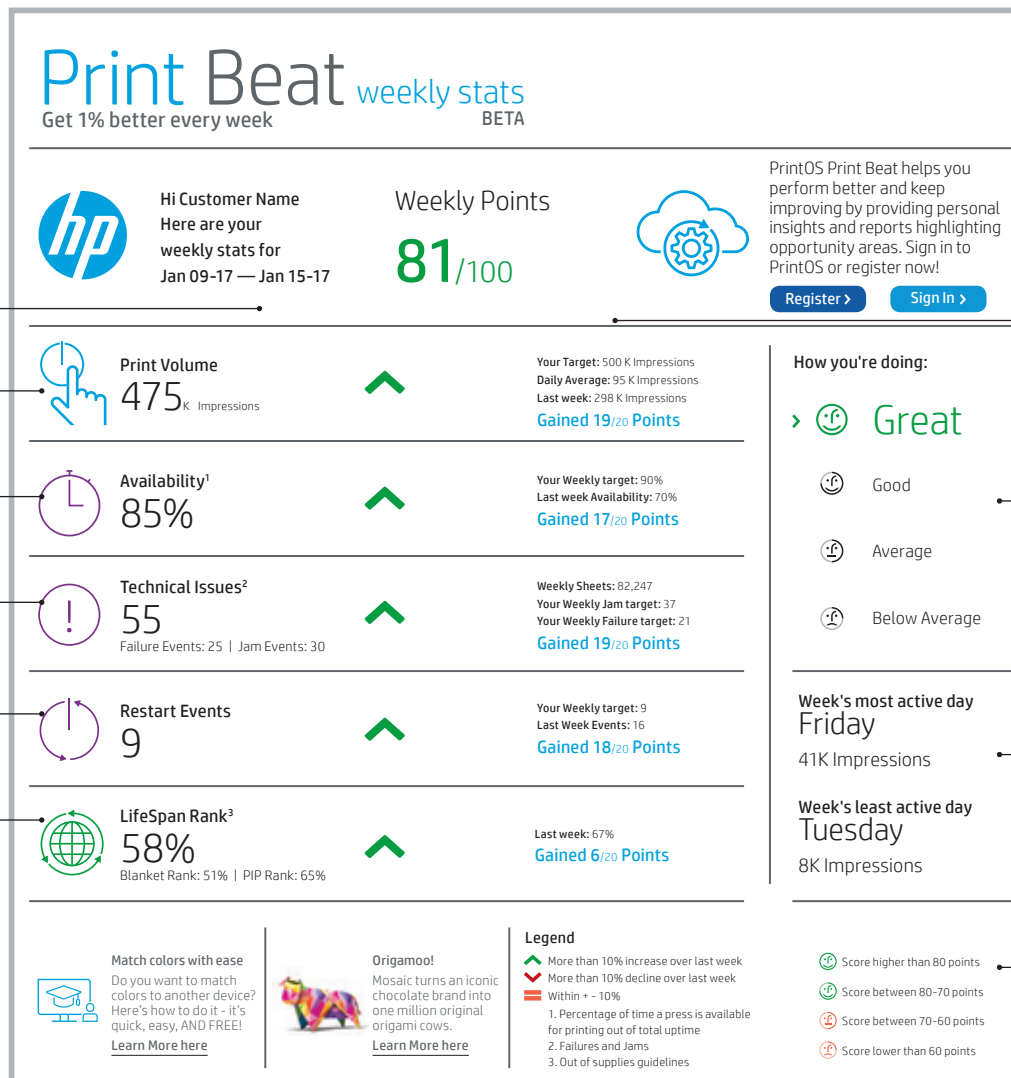

Total print volume for a given week

Weekly availability percentage

Actual number of weekly Technical issues

Actual number of weekly restarts

Blanket & PIP lifespan as a % of HP Indigo guidelines

Weekly points for a given week

Benchmark your press's performance

Identify the best and least active days of your production week
