

# HP Roam

## The World is Your Office

### Business went mobile, now printing has caught up

Across businesses large and small, mobility is transforming the way we work. Work is now collaborative, flexible, and project-oriented. It's unbound by time or geography.

But printing has been slow to adapt to this new reality. It's still too difficult for users to print when away from their desks, while working from other locations, or from a mobile device.

### Easily enable secure, mobile printing for every user

HP Roam is a new, universal business printing experience that reshapes how innovative businesses print. You can replace traditional printer-specific drivers and mobile apps with a new, intuitive print experience that is simple to use, provides a similar experience across desktop and mobile devices, and helps protect customer and company data with business-grade security.

Mobile professionals can now print at virtually any time, from virtually any location and device. Print jobs are submitted to the cloud as users create or consume content.

Prints can then be securely retrieved from anywhere in the office, at home, or at a growing number of public print locations. There's no need to worry about device-to-printer compatibility or connectivity.

### Print at public locations

HP Roam uses GPS to show nearby available printing spots, such as hotels, airports, and libraries.<sup>1</sup>

### 1 Print to personal print queue

Users print from any personal computer or mobile device, selecting HP Roam rather than a specific printer. The print job uploads to the HP Roam cloud.

### 2 Automatically discover printers

When a user's mobile device is close to an enabled printer, HP Roam delivers a notification that prints can be released from the cloud queue. If away from the office, the HP Roam app shows a map with available print locations.

### 3 Authenticate and secure release

Once at the printer, all or selected print jobs in the queue can be released by a mobile device. Users can authenticate seamlessly via their mobile device, or by using a password or ID badge.

## Notifications make print release a breeze

When you are in range, Bluetooth technology enables fast autodiscovery of printers, along with user notifications.

## Deploy a secure, scalable, cloud print solution

As a subscription-based service, HP Roam is easy for IT to manage. Fleet-wide deployment tools help enable HP printers and integrate with Active Directory to set-up user accounts, authentication, and for back-end print tracking and reporting. The HP Roam BLE technology is included in select, new HP printers and MFPs and can be enabled for existing devices via an optional accessory.

## Deliver a single, universal print experience

Managing printing for users on the go—while trying to maintain consistency and keep your enterprise environment secure—can be a real headache. HP Roam replaces printer-specific drivers and mobile apps, allowing users to print from any personal computer or mobile device.

You enjoy the simplicity of a single cloud-based print solution and better control over your print environment. And you can help save costs due to fewer wasted print jobs.

<sup>1</sup> Printing at some public printing locations may incur extra charges.
