

HP Roam for Business

The world is your office

Print effortlessly from any device, virtually anywhere, to any HP printer—securely through the cloud

Across businesses large and small, mobility is transforming the way we work. Work is now collaborative, flexible, and project-oriented. It's unbound by time or geography.

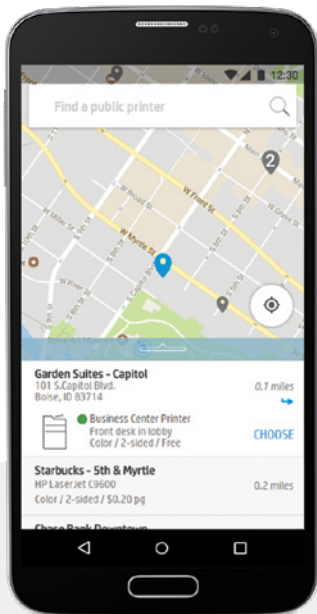

But printing has been slow to adapt to this new reality. Until now, it's been difficult for users to print when away from their desks, while working from other locations, or from a mobile device.

Easily enable secure mobile printing for every user

HP Roam for Business is a universal business printing experience that reshapes how innovative businesses print. You can replace traditional, printer-specific drivers with an intuitive print experience that is simple to use, is scalable, and provides a similar experience across desktop and mobile devices. Customer and company data are protected by advanced security features such as encryption, authentication, and integration with Azure Active Directory.

Mobile professionals can now print at virtually any time, from virtually any location and device. Print jobs are submitted to the cloud as users create or consume content.

Prints can then be securely retrieved from any enabled device in the office, at a home office, or at a growing number of public print locations.¹ There's no need to worry about device-to-printer compatibility or connectivity.

Print at public locations

HP Roam uses GPS to show nearby available printing spots, such as hotels, airports, and libraries.¹

1 Print to personal print queue

Users print from any personal computer or mobile device, selecting HP Roam rather than a specific printer. The print job uploads to the HP Roam cloud.

2 Automatically discover printers

When a user's mobile device is close to an enabled printer, HP Roam delivers a notification that prints can be released from the cloud queue. If away from the office, the HP Roam app shows a map with available print locations.

3 Authenticate and secure release

Once at the printer, users can use their mobile device to authenticate and release all or selected print jobs in their queue.

Notifications make print release a breeze

When you are in range, BLE technology enables fast autodiscovery of printers, along with user notifications.

Deploy a secure, scalable, cloud print solution

As a subscription-based service, HP Roam for Business is easy for IT to manage. Fleet-wide deployment tools help you get up and running quickly. Integration with Azure Active Directory helps you set up user accounts and can streamline authentication and back-end print tracking and reporting. HP Roam Bluetooth® beacon technology (BLE) is included in select HP printers and MFPs and can be enabled for existing devices via an optional accessory.

Deliver a single, universal print experience

Managing printing for users on the go—while trying to maintain consistency and keep your environment secure—can be a real headache. HP Roam for Business replaces printer-specific drivers, allowing users to print from any personal computer or mobile device.

You enjoy the simplicity of a single, cloud-based print solution and better control over your print environment. And you can help save costs due to fewer wasted print jobs.
