

Print refresh reduces running costs by 60% and transforms workplace

New HP PageWide fleet delivers cost efficiency and environmental benefits

Industry

Public service

Objective

Install a centralised management of print infrastructure and automated replacement of toner

Approach

An extensive comparison of several solutions resulted in a purchase of HP PageWide printers, multifunction devices and an MPS contract with HP Partner Kaut-Bullinger

IT matters

- Consolidation of print apparatus with HP Web Jetadmin software
- The IT team workload for print maintenance issues has reduced due to the MPS contract with Kaut-Bullinger, which replaces all toners at low levels

Business matters

- Efficient and reliable running of the HP PageWide devices
- Cost savings of about 30% per printed page
- Environmentally-friendly HP PageWide technology eliminates fine dust emissions in the workplace
- Competitive MPS agreement with HP delivers additional devices and automated ordering systems for consumables, unlike the City's previous contract

“The HP PageWide printers and multifunction devices have impressed us in every respect. The print quality is very good. The devices are fast. And our staff can now change the ink cartridges easily by themselves.”

– Martin Unterstraßer, head of IT at the City of Mühldorf am Inn

Sustainable printing with energy-efficient devices and no fine dust pollution

The district capital City of Mühldorf am Inn has saved 60% of energy costs generated by its printers, and eliminated the effects of fine dust pollution, by upgrading the majority of its laser printers to HP PageWide printers and multifunction devices – also compatible with patented inks.

Challenge

No centralised IT management for printers, employees affected by fine dust pollution
The City of Mühldorf am Inn printed 55,000 pages a month – requiring a streamlined process to manage this huge output of print.

Solution

Replacing laser printers with HP PageWide technology
City of Mühldorf am Inn opted for a refresh to its printing fleet, by purchasing HP PageWide color multifunction devices and an HP Partner Managed Print Services (MPS) contract delivered with Kaut-Bullinger. HP Web Jetadmin supports print management to install, track and maintain the operational capability of the printers.

Benefits

Efficient print management delivers savings
Energy costs are 66% lower than its previous printers and they operate on reduced energy usage, working at just 70 Watts in print mode. City of Mühldorf am Inn smart print procurement with HP represents a 20% saving.

“An advantage for the IT department is the HP Web Jetadmin software, which enables the team to manage the entire printer fleet centrally. Service jobs have been reduced to a minimum.”

– Martin Unterstraßer, head of IT at the City of Mühldorf am Inn
