

Dwight Barron

HP Fellow
Enterprise Group
Hewlett-Packard Company

Dwight Barron is Chief Technologist for HP's Moonshot business unit. His responsibilities include overseeing Moonshot architecture and innovation roadmaps for HP's breakthrough energy-efficient servers and solutions.

Barron works with industry partners, leaders, and standards organizations to define and align HP's architectural vision and product roadmaps with customer needs. Current activities include energy efficient computing in x86 processor and ARM System-on-Chip designs, media processors, network processors, digital signal processors and FPGA computing. He also works closely with HP Labs to develop advanced research and technology transfer opportunities.

With over 25 years of experience with Compaq/HP, Barron has made numerous technical contributions.

Barron holds more than a dozen patents in computer architecture, HPC fabrics, networking, security and operating system design.
