

## How to explain HP Mobile Printing for HP DesignJet

HP Mobile Printing is the easiest way to **print** in a DesignJet. You can do it from an Apple® or Android™ Device. HP is leader in the Mobile Printing solutions for Large Format Printers.

The first step to print from your mobile device is to ensure that you are connected to the same network

as the printer. 

**TIP:** With the [HP DesignJet T830 MFP](#), you can connect directly to the printer with Wi-Fi Direct – Go to settings , Wi-Fi and choose DIRECT-XX-HP DesignJet T830...

If you are an [Apple® user](#), you don't need to download any additional app to print. Our printers are AirPrint compatible.

Directly from your document/picture, just tap the share button  and at the bottom of the screen, tap

the print button  **Print**. As simple as that!

If you are an [Android™ user](#), you have to download the [HP Print Service Plugin](#)  from Google Play (free app) to enable the printing mode in your device.

**(Note:** If you have an HP Small Format printer, and you print from your mobile device with it, probably you've already gone through these steps).

Once that, you will be able to print directly from your Android device. Open your document, tap the

settings button  and then the print button  **Print**.

The HP Print Service Plugin will open automatically and you will be able to choose various settings. Once finished, just tap the printer icon  and your document will start printing!

HP Mobile Printing for DesignJet doesn't end here. You cannot only print, but also **scan** to your mobile device to easily share your documents from there. You will be able to share it through your cloud repository or by email to any of your contacts. How can you do this?

Download the [HP All-in-One Printer Remote App](#)  from your App Store (free app available for Apple® and Android™). Introduce the document you want to scan in the printer, take your mobile device

and open the AiO App. Tap the Scan button  **Scan**, select the settings and scan. Once ready, you will be able to crop, rotate and save. Finish by uploading a copy to your cloud repository or send it through email to any of your contacts.

Sharing from your mobile device will enhance the communication with all your team, having access to the documents whenever, wherever.

With the HP AiO Printer Remote App you will also be able to print, see the levels of inks of your printer and Capture Documents with the camera of your device.
