# Printing Security Pro 2.0

## Background

For businesses of all sizes, document security is a top priority. Printers are usually placed in an open area in the office for all to use, which can raise the risk of sensitive documents falling into the wrong hands. Users also have to reprint documents if one goes missing by mistake, causing printing costs to increase.

## Solution Benefit

Printing Security Pro 2.0 is an advanced solution for secure document printing. You can easily manage device and user groups, and monitor usage by individual or group. IT administrators can cut printing costs and enhance security by allowing only specific users or groups with authentication to access the printer. Fleet monitoring also becomes easier to manage with automatic notifications when an error occurs, reducing the time spent manually checking each device. Administrators can even monitor each user or group's printer usage by checking the automatic usage reports to limit unnecessary printing loads.

## Supporting Features

| | Yes | No |
|---|---|---|
| • Does it support pull printing? | ✔ | ☐ |
| • Does it support secure release? | ✔ | ☐ |
| • Does it support TCP Converter? | ✔ | ☐ |
| • Does it automatically notify admins of device errors? | ✔ | ☐ |
| • Can admins track usage by user and group? | ✔ | ☐ |
| • Does it support Image Log? | ✔ | ☐ |

### Enhance printing protection with Secure Release and Pull Printing

With Printing Security Pro 2.0, you can ensure all documents are printed securely on any printing device using three printing modes. Pull Printing mode lets you send a document to any registered printer, and print out the actual document after a secure authentication process. Stored Printing mode sends print job directly to a specific device for retrieval after an authentication process. For users without authorization, such as guests, Instant Printing mode enables printing on specific devices without a separate login process.

## Convenient TCP Converter Support

Administrators no longer need to worry about security on printer devices that cannot install additional solutions. Printing Security Pro 2.0 works on all Samsung and third-party printers through a TCP converter.

## Heighten security and trace documents with Image Log

Printing Security Pro 2.0's Image Log stores the actual document image in the server, enabling administrators to strengthen security by tracing the printed document back to the user. In addition, once the user completes the authentication process at a specific device, their job begins without delay, whether it is a copy, scan, fax or print job.

## More automatic report formats to choose from

Printing Security Pro 2.0 helps boost work efficiency by letting you create Excel reports in one go. With a selection of 10 basic billing reports to choose from, users can save time from manually converting file formats.
