HP Access Control Secure Pull Printing Solution

Increase security, control, and productivity with efficient pull printing

Addressing security, budget, and environmental concerns at the same time can get complicated. Especially when you add in a mobile workforce that demands to print when and where they need to. Convenient pull printing and authentication can help increase security and boost productivity.

Empower your workforce with increased efficiency. With the HP Access Control (AC) Secure Pull Printing Solution, simply print to the network and then retrieve jobs from any solution-enabled device. Pull printing virtually eliminates unclaimed documents, and increases the productivity of mobile workers.

Solution at a glance

HP AC Secure Pull Printing helps you protect your sensitive documents and secure your printing environments—all while increasing convenience. Lower costs and conserve resources by better managing printing environments. Reduce the amount of unclaimed print jobs and control access to your networked devices. Retrieve jobs when and where you need to. Create the same ability to access documents and print—no matter where you are.

When you deploy HP AC Secure Pull Printing, the solution supports HP single-function printers, multifunction printers and networked scanners, as well as select imaging and printing devices from Canon1, Lexmark and Xerox.

What if you could...

• Protect documents and encrypt print jobs on their way to a device?
• Enhance the security of networked printers by easily authenticating devices and users?
• Offer print-reliant departments and mobile or remote workers access to the features they need?
• Delete unclaimed and obsolete jobs prior to printing—saving money and conserving resources?

Solution features

Deliver jobs to the right user, every time

Store documents on your secure server hard drive, then simply authenticate to release specific print jobs. The job remains in the queue until confirmed and released, and is then printed on the spot—to any solution-enabled device on the network.

Authenticate with ease

Set up simple authentication directly at the device, using HP proximity card readers, alphanumeric personal identification codes (PIC), personal identification number (PIN) codes, or smart cards.

Store and secure confidential documents

Help ensure that only the user who sent the print job may retrieve it. Jobs can be encrypted both in transit and on the printer’s secure hard drive. Even enable HP Access Control Secure Pull Printing without using a server.

1 Canon support is through HP Managed Print Services deployment only
A global telecommunications company had an uncontrolled print environment, and needed a more secure solution that also provided better mobility and flexibility to employees. HP AC Secure Pull Printing helped control output and access to devices through a single print queue. Employees could initiate printing virtually anywhere in the networked environment, and then collect print jobs at company-networked locations. Unclaimed print jobs were deleted from the queue after 72 hours, adding another level of security.

**Streamline print queues**
Reduce the amount of managed print queues. Your users can pull select print jobs directly and securely from device print queues—even use the “select all” button to print an entire set of documents.

**Print from anywhere within your network**
Retrieve documents using a smartphone or other mobile device. The HP AC Mobile Release makes it easy to send a job to a specific queue, authenticate using a smartphone or mobile device, preview the job list, and then select and print it.

**Reduce costs and unclaimed jobs**
Establish policies that promote responsible printing practices, and help conserve paper and energy. Automatically delete unclaimed print jobs after a designated period of time.

**Why buy HP?**
HP has the expertise to identify and integrate innovative solutions—for companies of any size—to help meet their complex business needs. As a global technology leader, HP offers financial stability and scale to improve IT value, enabling customers in major industries to become more cost-effective, efficient, secure, and sustainable.
