

# 5 Ways HP DaaS Simplifies IT

With the average employee using **2.3 devices** to do their job,<sup>1</sup> securing and managing an increasingly diverse landscape of endpoints is an ongoing struggle for IT managers. Adopting an HP Device as a Service (DaaS) model can make IT easier, by providing employees with the latest technologies while offloading routine device management tasks—and freeing IT for other priorities.

## Here are 5 ways IT can benefit from HP DaaS:

### Deploy new devices with flexibility.

In an HP DaaS model, your service provider ensures you always have the right devices to meet workforce demands. You can easily scale up or scale down to accommodate staffing or business changes.

### Keep devices up to date.

With device and software refreshes and updates as part of your HP DaaS plan, your end users will always have the latest technologies for optimal productivity.

### Improve productivity.

Forcing legacy devices to keep up with recent innovations is risky and can impact employee productivity. Performance features, support, and security can come built in to the latest devices and operating systems.

### Save money and IT resources.

By offloading device management to a trusted partner, your IT team can spend less time troubleshooting and maintaining devices and focus on other priorities. Plus, optimize spending with one predictable price per device.

### Secure end-user devices.

With HP TechPulse analytics, you can track the enforcement of security policies such as firewalls, encryption, password protection, antivirus protection, and device lock and wipe. The right DaaS partner can help you proactively approach security threats by providing the latest technologies.

## Rely on HP Device as a Service for unified endpoint management

By handing off some or all of your daily device monitoring and security tasks, you can optimize your IT assets and resources. HP DaaS offers hardware, analytics, support, and a full portfolio of services that span the entire device lifecycle. HP DaaS also includes plans in which HP Service Experts take on your day-to-day device management, with HP TechPulse analytics and industry-leading tools such as VMware Workspace ONE—so you can focus on new technologies and on supporting your users.<sup>2</sup>
