

**THE MARSHFIELD**  
THERAPEUTIC  
LUNG INVIGORATOR  
AND DEVELOPER.

MANUFACTURED BY  
**The Marshfield Novelty Co.,**  
511 Washington Avenue South,  
MINNEAPOLIS, MINN.

## The White Plague.

---

"Of the 90,000,000 people in our land today 9,000,000 will die of tuberculosis, *unless we develop methods for its prevention*," said Dr. Homer M. Thomas, of Chicago, in an address recently before the Chautauqua assembly. The age of those dying from tuberculosis averages from 18 to 40 years. The best results of education, culture and labor are then achieved. The climax of one's usefulness to the world is at its zenith. What an appalling fact to appreciate, then, that these deaths result from disease absolutely preventable

### **Ozone As a Life Giver.**

Its presence in the blood brings renewed life and vigor, the flagging forces of nature finding in its subtle chemistry the antithesis of decay. The sodden skin, the lustreless eye, the clouded brain, under its vitalizing influence are rejuvenated. Oxygen reduces fevers, aids digestion, gives refreshing sleep and heals the lungs. The source of a large percentage of lung trouble is caused by improper respiration. Breathing is the most important act of life, but not one person in a thousand breathes correctly.

We read lengthy sermons on out-of-door

exercise, fresh air and what not, but men actually starve for oxygen in the most healthful climate because they do not breathe enough of it. Pure air is good, but *any* air taken in proper quantity is better than a restricted supply of pure air. The breathing provides a means of escape for certain poisonous matter formed by the body. The blood, in circulating through the body, collects the poisons formed by the breaking down of tissue, which is carried to the lungs. After throwing off its accumulated poisons through the medium of the breath, the blood absorbs all the oxygen obtainable in the lungs. This oxygen is carried to the tissues for their rebuilding. Three times a minute the blood makes a complete circuit, carrying oxygen to the tissues and returning to the lungs laden with poison.

One-third of the poison made by the body is excreted through the lungs. The remainder is, normally, carried off by the bowels, skin and kidneys.

Few people use their full lung capacity, the majority using a very small portion of their lungs only. An eminent authority declares that less than 1 per cent. of the people know how to breathe correctly.

### **Life Itself in the Air We Breathe**

Without food man may live from thirty to sixty days, or even longer. Without fluids he can live for several days. Without air he must die in a few minutes. Of all foods

the oxygen of the air is the greatest. To obtain a sufficient supply of this food we must breathe deeply, the greater the quantity taken into the lungs the greater the strength obtained. Breathing with the full lung capacity is the one sure preventative of lung diseases, as disease can only attack the unused portions of the lungs. *Tuberculosis can not only be prevented, but cured.*

As people will not breathe enough "naturally" either to prevent or cure disease, a method had to be devised for the purpose of forcing the desired result.

Various devices and machines have been evolved aiming at the above result, but until the advent of the *Marshfield Therapeutic Lung Developer* nothing has proved of real merit. The blowing machines and spirometers are wrong in principle. *The air should be inhaled* through the machine into the lungs, not blown out. The Marshfield Therapeutic Lung Developer is a genuine medical instrument, built on scientific principles, and endorsed by leading physicians. It is an *inhaling* machine, the air being drawn into the lungs after first passing through antiseptic gauze, through a series of revolving fans, thence passing through medicated vapors arising from medicinally saturated cotton by action of the fans, thence to the lungs. Any medicine can be used in the machine, insuring direct results to the seat of disease in the lungs or throat without poisoning the stomach with

drugs. A bottle of medicine prescribed by one of Minneapolis' leading physicians as a specific for the prevention and cure of tuberculosis (to be used in the Marshfield Developer only, and must not be taken into the stomach) is furnished with each machine. Direct and lasting results can be obtained by using the Developer without medicine, but we strongly advise the use of the medicine furnished. Germs or microbes can not live in the lungs when the Developer is used according to directions.

The Developer is handsomely and durably constructed of oxydized or nickel plated brass, round, six inches in diameter and three inches deep. The double dial is graduated scientifically correct, showing by the movement of the pointers the exact number of cubic inches of air inhaled each breath, also indicating the number of lineal inches of chest expansion. The mechanism is perfect and will not get out of order. A receptacle in connection with the revolving fans holds the medicine. A mohair covered rubber tube, with vulcanized rubber mouthpiece, conveys the air to the lungs.

The instrument is designed for the desk, or can be hung on the wall, and is the greatest stimulator to correct breathing ever invented, and an ornament as well. The Developer isn't a plaything, catch-penny scheme or fake of any kind. It has real merit, and we will refund purchase price to anyone not receiving immediate and lasting benefit from its use.
